A Self-Stabilization Bibliography

Last revised: 27 December 2002

Ted Herman herman@cs.uiowa.edu
University of Iowa
Department of Computer Science

DISCLAIMER: This bibliography may contain errors (however its faults are not malicious). Corrections and additions are welcome.

TIP: To force LaTeX to quickly format a bibliography, use the standard reference to the "`.bib`" file and place the command `\nocite{*}` after your `\begin{document}`.

THANKS: Colette Johnen.

Searching: To obtain entries with a particular string, you can use the following script:

```
#!/bin/sh
awk -v FS="\n" -v RS="" '/'"$1"'/ {print; print ""}' stabilization.bib
```

If the script is called `bibgrep`, then the command `bibgrep Dijkstra` will produce all the entries for Dijkstra.
